Industrial Equipment

Hy-Tek Intralogistics' Asset Liquidation Services can streamline the sale and removal of your excess material handling equipment, allowing you to focus on your next warehouse/facility move.

Below is our proven process:

- **Inventory Identification**
We create a detailed listing of all the designated assets. The customer's categorized list and associated photos are provided in an easy-to-follow spreadsheet format.
- **Asset Estimation**
Hy-Tek will provide a practical spreadsheet list of all the estimated assets resale values well before the dismantling process begins.
- **Proposal Submitted**
A written proposal is generated to acquire all unused or unwanted material handling equipment.
- **Project Timeline**
A detailed project timeline identifies essential project action items and milestones to align expectations with results. Our communication and organized approach will ensure that critical deadlines are met.
- **Dismantling & Shipping**
We manage the dismantling, shipping, disposal, and resale efforts so you can focus on your next facility move. The affected areas of the warehouse will be swept clean, and a final punch list will be provided to assure quality control and satisfaction.
